

GALNOEL PETER RINDENGAN

Manado, Sulawesi Utara | +6285696402370 | rindengangalnoel@gmail.com | [linkedin.com/in/galnoel-rindengan/](https://www.linkedin.com/in/galnoel-rindengan/)

SUMMARY PROFILE

Highly accomplished Informatics Engineering Graduate with a distinguished record in national-level technical competitions. Recognized as a multi-year GEMASTIK Finalist and PIMNAS 38 Bronze Medalist, specializing in advanced Deep Learning architectures such as Multimodal Parallel Fusion Transformers, CoAtNet, and Contrastive Learning. Proven expertise in developing Proof of Concept (PoC) AI solutions, including an on-premise Retrieval-Augmented Generation (RAG) chatbot for PT. Bank SulutGo using Ollama, n8n, and Supabase. Adept at bridging the gap between complex research and production-grade software, with a strong foundation in Python, TypeScript, and backend system design.

EDUCATION

Universitas Sam Ratulangi, Manado, Indonesia

Bachelor of Computer Science (S.Kom) in Informatics Engineering | CGPA : 3.93/4.00

2022 - 2026

- **Relevant Courses:** AI, Data Structures & Algorithms, Database, Probability and Statistics, Software Engineering.

AWARDS

- 3rd Place Presentation Category in PKM KC at Pekan Ilmiah Mahasiswa Nasional (PIMNAS) Ke-38 November 2025
- Most Inspiring Team in GEMASTIK XVIII October 2025
- Finalist of Data Mining Division in GEMASTIK XVII October 2024
- 1st place in SATRIA DATA 2024 selection at UNSRAT level for Big Data Challenge May 2024

PROJECTS

Solana-Based Web3 Game (CORA) – Backend Developer

Apr 2026 – May 2026

- Engineered a high-throughput Bun/Hono backend with real-time WebSocket matchmaking, a server-side cryptographic settlement oracle via `@solana/web3.js`, and verifiable MagicBlock Ephemeral Rollup integration.

AI Math Tutor Web App (Socratix) – AI Engineer

Apr 2026 – May 2026

- Designed a NestJS multi-agent pipeline (Router/Planner) using Groq, implementing regex fast-paths and LLM fallbacks that achieved 100% intent classification accuracy with ~5ms routing latency.
- Architected defensive error-recovery layers and graceful degradation protocols to maintain system stability and eliminate downstream validation failures across edge-case user queries.

Javanese Aksara Image Classification (GEMASTIK XVIII Finalist)

October 2025

- Implemented CoaT (Co-Scale Conv-Attentional Image Transformers) to optimize feature extraction across 20 classes.
- Achieved a 96% F1-score, successfully managing class imbalance across the dataset.

Multimodal Fish Freshness Classification (GEMASTIK XVIII)

Jul 2025 – Aug 2025

- Developed a classification system using Contrastive Learning and a Multimodal Parallel Fusion Transformer
- Achieved 85.4% accuracy and an 84.3% F1-score using the Mendeley Data "Dataset for Fish's Freshness Problems."
- Attained a peak 92.7% F1-score for the "Marginal" freshness class.

EXPERIENCES

Internship

Jun 2025 – Aug 2025

PT. Bank SulutGo, Manado, Indonesia

- Architected and deployed an on-premise virtual assistant using Ollama, n8n, and Supabase (pgvector) to eliminate internal "information silos".
- Ensured 100% data security by configuring the entire AI stack (LLM & Vector DB) to run locally on bank servers, preventing data leakage to third-party cloud services.
- Achieved 95/100 score in "Discipline and Attitude" and 90/100 in "Presentation Skills" from the field supervisor.

Development Lead Chatbot Project for TECHOEST 2024

Jul 2024 – Nov 2024

UNSRAT IT Community, Manado, Indonesia

- Led a team of 6+ Machine Learning Engineers to build and deploy an AI chatbot web and mobile application leveraging Gemini AI for the faculty's student organization.
- Deployed model to server with flask using GRPC to help serialize (organize) the data for fast transmission between services.
- Coordinated the software team in the end-to-end development of accompanying mobile and web applications.
- Supervised the data engineering team, overseeing data collection workflows and analysis pipelines.

Committee of Machine Learning Division

Jan 2024 – Jul 2024

UNSRAT IT Community, Manado Indonesia

- Designed a comprehensive 6-month curriculum covering fundamental to advanced machine learning concepts.
- Instructed and facilitated workshops for a cohort of 20+ members passionate about AI and Machine Learning.

SKILLS

Frameworks & Tools: PyTorch, TensorFlow, Nest.js, Flask, gRPC, Bun, Hono, n8n, Supabase (pgvector), Ollama, Flutter, Git.

Databases: PostgreSQL, MySQL, MongoDB, MariaDB.

Language : Indonesian (Native) and English (Intermediate)
